

Digilock

security simplified™

designed for you

Every aspect of environment and operation impacts the experience your facility provides. Enhance that experience with a lock designed for you – your facility, your users, your time. Digilock, with precise focus on style, ease of use, and lock management, delivers an unparalleled security solution that performs exactly how you want it.

RFID keypad

your facility

With elegant design and industry-leading technology, Digilock security solutions complement your room environment and style. Digilock, with solid metal bodies in designer-selected finishes, are easily mounted on wood, metal, glass, polycarbonate and phenolic lockers, cabinets and comparable storage fixtures.

your users

With both keypad and RFID lock interface options, Digilock security solutions meet the personal storage characteristics of your facility's users. Locks are available for assigned-use where dedicated or long-term storage is required and/or shared-use where any number of users temporarily store personal belongings.

your time

Lock management time is significantly reduced by Digilock's unique Manager Bypass Key, a comprehensive management tool. It gives facility managers immediate access to any locker in the event of a forgotten code or security breach and also provides external power to the lock. Less time on lock management gives you more time with members, guests, and staff.

enhanced experience

choose your solution

Digilock offers multiple lock body styles and latch options to match your facility's application. Standard, vertically and horizontally oriented lock faces accommodate your door design and lock placement. Spring latch/bolt, dead latch/bolt, or cam lever locking options support the security and latch requirements of your storage fixtures.
