THE COVERMASTER STORY 20

MEMBERS OF

TRUSTED BY THE PROS WHEN IT MATTERS MOST

As the company that introduced lightweight raincovers to the industry 30 years ago, COVERMASTER® has manufactured and sold more raincovers than any other company. Through this experience in manufacturing and extensive feedback from our clients, which includes Major League Teams to the Little Leagues, we have continuously redesigned and developed cutting edge materials. Unlike others, we do not sell raincovers made from industrial grade fabrics. Due to the size and unique requirements of infield raincovers, we have sought out and tested superior strength polyethylene cover, where we have been able to reduce the weight of the cover to save hundreds of pounds in weight for the grounds crews, while still achieving superior strength characteristics and greater durability. Made from high quality resin, our pre-elongated core tapes provide superior stability and increased strength and durability, as they will not stretch when pulling the raincover. Rather than adding extra inexpensive low density polyethylene coating, we maintain a lighter weight raincover by investing in heavier high density polyethylene black core tapes, which are highly UV stabilized and provide 100% sunblock. This higher denier core ensures full tape coverage for higher fabric stability and lighter weight covers with superior strength, performance and durability.

Our experience has also taught us that a simple web handle, whether straight, twisted or plastic enclosed, sewn into a multi-ply reinforced hem, will not stand up to the rigors of handling a large infield raincover, especially in windy conditions with rain water on the cover. By thorough research and testing, COVERMASTER® has designed the only athletic field raincover specific handle on the market. It has a heavy duty vinyl reinforcing patch, with an integrated strap handle (see page 7), which is designed to spread the pull force over a greater area than a simple web handle ever could. It is also the perfect location for our heavy duty brass grommets, as there is more fabric for the grommet to bite into and hold. In fact, since introducing this handle, it has had a success rate of over 99% of staying attached to the raincover.

Anyone can sell an inexpensive imported industrial grade fabric, but only COVERMASTER® manufactures and sells a baseball/softball specific raincover designed for this unique and demanding application. When you build something better, word gets around. Ask those who know.

PREMIUM FIELD COVERS

RAINCOVER ULTRA™

As the company who introduced lightweight field raincovers over 30 years ago, Covermaster continues to lead the industry. Our ongoing Research and Development, coupled with our experience and customer feedback, has led to the latest technology in lightweight Raincover design. With Raincover Ultra™, we have created the industry's strongest core raincover, which is critical when removing hundreds of pounds of water from the cover's surface. We then reconfigured the weave count of the core, resulting in a more stable base, as well as creating a 100% sunblock, to keep the turf cooler. In addition, the core tapes are pre-elongated, which stretches each strand of the core prior to use on your field, resulting in a highly stabilized cover, which is more durable, and results in less stress on the raincover's surface coating. Then, to keep the turf

cooler and drier, we utilized our exclusive Shield-Tek™ coating technology. The Raincover Ultra's surface is designed with less friction in mind, to resist dirt accumulation better than other covers, as well as making it easier to remove snow and ice. All of this was accomplished without sacrificing weight. At over 200 pounds lighter than other available covers, Raincover Ultra™ is not only the strongest cover of its kind, it is also easier to handle and saves time and labor costs.

Turf Friendly Color Options:

* Minimizes heat build-up

* Silver side up to reduce heat build-up, black side up to draw heat into the field in colder climates

RAINCOVER MAX™

Raincover Max™ with Shield-Tek™ is the choice when only the absolute best is required. Available in a white/black or blue/green color combination, this exceptional and unique material is 50% lighter than vinyl and 150% stronger, which makes it ideal to protect against snow as well as rain. With its exclusive Shield-Tek™ coating, it will reduce heat build-up under the cover.

Colors:

*

** Warranties are prorated

- FLEX CRACK RESISTANCE (ASTM D-6182) Increases flex crack performance by 300%. Cover will stand up better to continuous folding and unfolding
- ABRASION RESISTANCE (ASTM D-3884-92) Up to ten times more abrasion resistance as compared to other covers
- ANTIOXIDANT WITH SUN GUARD® additive to reduce heat build up under the cover
- SEAM STRENGTH (PEEL) (ASTM D-4851) Improved seam strength - 150% at room temperature - 200% at 140° F (60° C). In tests, seams maintained an average of 97% fabric strength at temperatures as high as 140°F
- Available in RAINCOVER MAX and RAINCOVER ULTRA

PREMIUM FIELD COVERS

RAINCOVER PREMIER™

While Raincover Premier is comparable to the 6 ounce fabric alternatives in the marketplace, it boasts more impressive specifications and performance, without the extra weight. In fact, at over 260 pounds lighter on a full size field cover section, Raincover Premier will have superior performance and be easier to handle, requiring fewer crew members.

Color:

RAINCOVER VINYL

For those who prefer conventional, heavier weight covers, COVERMASTER® offers a wide selection of colors and weights. These premium covers are available in both 10 ounce and 14 ounce weights, with strength and durability which are second to none.

FIELD COVER GRAPHICS

In yet another first from COVERMASTER®, graphics are now available for our lightweight polyethylene covers, as well as our vinyl covers. To the delight of marketing departments in every organization, revenue generating ads or team logos can now be placed on COVERMASTER®'S series of lightweight polyethylene field covers. Our new cutting edge technology opens up a new revenue stream for every team. Field Graphics are available on all materials from our full field covers, to our Sideline Covers, Cross-Over Covers and even our Fitted Storage Covers.

ASK FOR DETAILS

INFIELD SKIN & SPOT COVERS

INFIELD SKIN TARPS

These 2-piece protective covers provide a complete moisture management system that is designed to fit your regulation field dimensions with minimum overlap on the turf. They are made from the strongest, most durable, lightest weight polyethylene available, which allows for easy placement and removal with very few staff. They also have grommets equally spaced around the perimeter of the cover to allow for a secure anchored placement. COVERMASTER® Infield Skin Tarps can remain over the infield skin for extended periods of time to prevent evaporation of moisture from the soil. Since this tarp covers just the soil, it can be left on an infield for days, or even longer, without risk of the sun burning the turf. A skin tarp can also be used for winter protection to prevent weed growth, erosion, and materials from blowing onto the edge of the turf, leading to a reduction in the need for turf repair. COVERMASTER® Infield Skin Tarps are designed to the specifications of Major League, College, High School and Softball regulation field sizes. Base path tarps are also available to complement the two piece sectional panels, if you require complete base path protection. Custom sizes are also available on request.

AVAILABLE IN: RAINCOVER MAX, RAINCOVER ULTRA & RAINCOVER PREMIER

WEIGHTED SPOT COVERS

Spot Covers stay put without stakes or sandbags. A steel chain in the edge hem keeps wind from getting under, which is why these tarps have been field proven to stay down in winds as high as 65 mph. These tarps are made with heavy duty vinyl-polyester fabric with UV and mildew inhibitors. Graphics available.

SPOT COVERS - POLY

COVERMASTER® Spot Covers - Poly are made of material with a high strength-to-weight ratio, making them ideal for daily field maintenance use. They are very durable and highly resistant to moisture and tearing. Should the sun break through sooner than expected, the white/silver colored surface acts like a mirror and keeps the turf cool much longer than conventional covers, so there is less worry about turf burn. Graphics available.

SPOT COVERS - VINYL

Manufactured from our heavy duty 14oz or 18oz coated vinyl, these covers are proven to last longer than simple vinyl laminate covers manufactured by others. All covers include a hemmed edge with brass grommets around the perimeter. Trust your spot areas to COVERMASTER®, just like the Pros do. Graphics available.

RAINCOVER BASEKIT

The COVERMASTER® Raincover Basekit is made of material with a high strength-to-weight ratio, which makes it ideal for its use. It is highly resistant to moisture and tearing, so it will last season after season. An economical alternative to full infield covers, it includes: homeplate, pitcher's mound, and 3 base covers - with anchor pegs.

RAINCOVER ACCESSORIES

FITTED STORAGE COVERS – VINYL & POLY

Fitted covers are available in both vinyl and poly. Manufactured in standard and custom sizes, they are suitable for advertising, sponsorship and team logos. Full digital graphics provide an impressive image on any field.

FLAT STORAGE COVER - POLY

A separate, flat cover is available to protect your raincover against the sun during storage. This cover is also useful to protect the raincover when rolling it across the warning track.

SUR-GRIP™ WEB HANDLES & ANCHOR STAKES

Our Sur-Grip™ Web Handles are the strongest in the industry. It has a heavy duty vinyl reinforcing patch, with an integral strap handle, designed to spread the pull force out over a greater area than a simple web handle ever could. It is also the perfect location for our heavy duty brass grommets, as there is more fabric for the grommet to bite into and hold. Since introducing this handle, it has had a success rate of over 99% of staying attached to the raincover. Our heavy duty 8" galvanized stakes are more durable than wire or candy cane stakes.

SUR-HOLD™ SAND BAGS - VINYL

These heavy duty sand bags are designed to last. Made from 18 ounce coated vinyl, Sur-Hold™ Sand bags were designed specifically for sports field applications. Easy to handle, these tube style sand bags are 8 inches in diameter by 36 inches in length. They will not only hold your covers in place, but also can be used for other areas on your field, such as over the feet of pitching screens to hold them securely in place. Available in a wide range of colors, Sur-Hold™ Sandbags are the obvious choice for those looking for quality and durability.

Colors:

White	Grey	Blue	Green	Red
-------	------	------	-------	-----

 *

POLY SAND BAGS

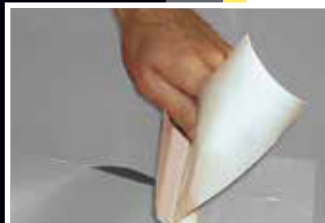

Polyethylene sand bags allow for quick anchoring of all raincovers, at an economical cost.

RAINCOVER-AID™ REPAIR SYSTEM

Raincover-Aid™ is a self-adhesive backed, durable, flexible, airtight, watertight, puncture-resistant, high-strength repair patch. Raincover-Aid™ is specifically designed to adhere to COVERMASTER® Raincovers. Each Raincover-Aid peel and stick repair patch is made from an exceptionally tough, matte finish, abrasion resistant, elastomer that resists puncture and tearing. Raincover-Aid provides a simple and easy method for patching holes and tears.

PEEL AND STICK

EVERGREEN™ TURF BLANKETS

EVERGREEN™

MORE THAN 30 YEARS OF FIELD PROVEN EXPERIENCE

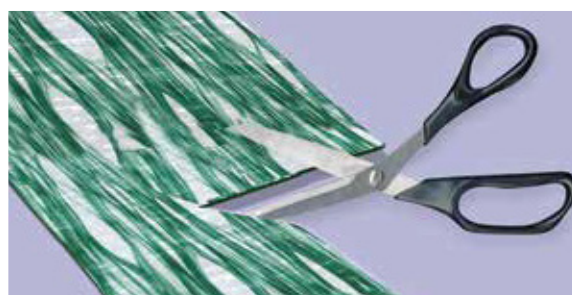

EVERGREEN™ Turf Covers produce a greenhouse effect allowing your turf to breathe and retain the right amount of heat and moisture. The result is faster germination of newly seeded areas and deeper root development. All Evergreen covers are uniquely woven to be permeable and are made of translucent polyethylene with a patented lace coating. They are UV treated, rot and mildew resistant, and will not show any significant wear or degradation by sunlight, even after years of regular use.

SMART EDGE TECHNOLOGY™

Only EVERGREEN™, with its unique fabric technology, can provide a turf blanket that does not need hems or grommets. Why be limited with anchor pin location? Since hems and grommets are needed on some competitive products, you can only secure the blanket where they stipulate. With EVERGREEN™, you can anchor wherever needed. Plus, without hems, you don't get the tell-tale evidence where light does not penetrate the multiple hems, leaving a different color of grass around the perimeter of the cover. EVERGREEN™ does not require hems to prevent the material from unravelling.

FEATURES AT A GLANCE

- Accelerates grass growth
- Frost and winter protection
- Easy installation & removal in minutes
- Lightweight one piece construction
- Perfect for repairing heavy wear areas, saves on turf cost and maintenance
- Outlasts the competition
- Stronger & deeper root development
- Each cover comes with our exclusive SMART EDGE TECHNOLOGY™ - customize size and shape any time, onsite as needed
- Exclusive material that is only used in the turf industry
- Controlled earlier spring green-up
- Delay dormancy for late season sports
- Vented to allow the perfect amount of air, water & light penetration
- Non-absorbing and non-clogging, keeps the same performance year after year
- Ideal for daily use
- Anchor pegs are included, which can be placed anywhere on the cover without damage
- No hems or grommets that restrict anchor peg placement are required, but are available upon request
- Won't unravel like polypropylene materials
- Ideal for Transition Zone climates
- Color choices provide additional light spectrum benefits for turf

NO GROMMETS REQUIRED

PROTECT AGAINST FROST

**OUTSMART MOTHER NATURE
SEE THE DIFFERENCE WITH EVERGREEN**

NO HEMS OR GROMMETS REQUIRED

Highly visible pink coated anchor pegs supplied with Radiant, Spectrum and Premium models, uncoated pegs supplied with Original model.

The optional Cover Disk allows for more secure anchoring of Evergreen covers in high wind conditions, when used with the included anchor pegs. They allow sunlight to penetrate and can be placed anywhere in the cover.

EVERGREEN™ TURF BLANKETS

EVERGREEN™ RADIANT (SILVER LACE COATING)

Evergreen™ Radiant has a specialized silver coating designed to radiate additional heat back to the soil. With up to a 25% increase in heat retention, this is our longest lasting and most specialized turf cover. Incorporating new fabric technology, Evergreen™ Radiant is very effective for all types of climates and is extremely efficient for locations with a higher than average fluctuation in temperature. It also features stronger UV inhibitors, which help to both protect the cover and give it longer durability. It has a 12 year pro-rated Limited Warranty and includes our exclusive pink coated anchor pegs for easy installation and high visibility for removal.

EVERGREEN™ SPECTRUM (ORANGE LACE COATING)

Evergreen™ Spectrum has an orange coating that is designed to work with the sun to provide the optimal light for turf growth. This unique orange coating helps optimize the light for quicker green up, enhanced turf growth and health. Evergreen™ Spectrum has been made with our patented coating technology, protecting new and established turf and accelerating growth for all types of applications and constructions. It is both dependable and reliable for multiple season use. Evergreen™ Spectrum provides proven experience, and is coupled with an 11 year pro-rated Limited Warranty and our exclusive pink coated anchor pegs for easy installation and high visibility for removal.

EVERGREEN™ PREMIUM (GREEN LACE COATING)

Evergreen™ Premium has a dark green coating that is designed to draw in more heat, which can increase ground temperature in excess of 10°F (5.5°C). The color also has a great appearance that blends in with natural turf surroundings. Evergreen™ Premium has been made with our patented coating technology, protecting new and established turf and accelerating growth for all types of applications. It is both dependable and reliable for multiple season use and has helped to set a standard for quality and longevity within the turf industry. Evergreen™ Premium provides proven experience, and is coupled with a 10 year pro-rated Limited Warranty and includes our exclusive pink coated anchor pegs for easy installation and high visibility for removal.

EVERGREEN™ ORIGINAL (WHITE LACE COATING)

For over 30 years, our Evergreen™ Original patented cover has set the standard for turf covers in the industry. Unlike competing covers, it works like a greenhouse by allowing sun, air, and moisture to penetrate the cover and reach the turf. This feature also allows any excess heat to be released through its unique lace coating. Evergreen™ Original is easily identified by its white lace coating and offers all the benefits of Evergreen™ turf covers at a price that can fit even the most modest of budgets. Evergreen™ Original comes with a 7 year pro-rated Limited Warranty and uncoated anchor pegs.

ON-DECK CIRCLES

DURA-PAD ON-DECK CIRCLES

COVERMASTER® On-Deck circles offer brilliant graphics that are second-to-none in providing great sponsorship opportunities or on-field team logos. They are extra durable with a spike resistant surface so they can be used season after season. Using advanced polymer technology, Dura-Pad On-Deck Circles are engineered to meet the demanding requirements of the professional baseball environment. Each Dura-Pad On-Deck Circle is custom molded in multiple layers. Made with a high-density recycled rubber base, a strong fiber mesh core and a durable polyurethane surface, Dura-Pad On-Deck Circles are designed to resist damage from cleats and equipment, to give you reliable use game after game, season after season.

TOUGH ENOUGH FOR THE PROS. TOUGH ENOUGH FOR YOU.

PRINTING

State of the art digital printing allows the teams or sponsors to display a message or logo with the highest visibility. Many attempts have been made to produce a quality On-Deck Circle that would stand up to the demanding requirements of the professional baseball environment, but only Dura-Pad has succeeded. No others provide the bright, sharp, and durable graphics that are the hallmark of Dura-Pad On-Deck Circles. They also clean up easily after the game.

All On-Deck Circles can be refurbished with new graphics.

UNIQUE & PROFITABLE SOURCE OF REVENUE

Dura-Pad On-Deck Circles are ideal for sponsor placement because it offers brilliant graphics that are not only visible throughout the stadium, but also durable for use game after game, season after season, maximizing profitability on multi-year contracts. Many sponsors are now requesting that On-Deck Circle placement be part of their sponsorship program because they understand the value of being "in the action". Nothing makes a sponsor happier than to see a ball hit into the outfield where their logo appears, but fans keep a constant eye on the on-deck area to see who is up next. This provides views of the sponsor's brand as many as 80+ times per game.

TARPMATE™ AIR ROLLER

TarpMate™ Air is a revolutionary storage and handling system for field covers. It eliminates the need to fold/unfold a cover prior to installation/removal. Due to TarpMate Air's light weight, it only takes 2 people to roll and unroll a 100ft (30m) wide field cover section, greatly reducing the time and effort required to handle field covers and turf blankets. TarpMate Air is easily inflated with standard backpack blowers.

STANDARD SIZES:

- 38" Diameter x 95' Long
- 38" Diameter x 75' Long
- Custom Lengths Available

READY TO ROLL COVER

DEFLATED WITH COVER ROLLED UP INSIDE

TARPMATE™ AIR WITH COVERS ROLLED & STACKED

TARPMATE™ ROLLERS

Designed to install, remove and store any COVERMASTER® Field Cover, TarpMate™ is a strong and lightweight roller that is easy to handle. Made of plastic, it will not rust or corrode. A smooth inner core liner provides greater overall strength, while its annular corrugations allow for straighter rolling. TarpMate™ is also available with optional SAFETY end caps, which prevent rodents and pests from being able to nest inside.

STANDARD SIZES:

- 28" Diameter x 20' Long (Softball)
- 28" Diameter x 30' Long (Baseball)
- 28" Diameter x 50' Long (optional)

TARPMATE™ SAFETY END CAP

TARP MACHINE™

With the TARP MACHINE™, any field cover roller can be moved around at will. It's a tool that's a must for frequent users of tarps or where manpower is not readily available. The well-constructed chassis is made of heavy gauge tubular steel and rides on two large standard turf tires. The direct drive from the P.T.O. rotates the four pneumatic drive wheels, which in turn move the tarp and its roller over the field.

MINIMUM REQUIREMENTS:

Tractor with 14HP, 540 PTO and 3 Point Hitch

BATTING PRACTICE TURF PROTECTION

PROTECT AGAINST INFIELD STRESS

One day's worth of batting practice and infield fungos likely puts more stress on the infield turf and clay in front of home plate than a week's worth of games. It's important to adequately protect the turf in this area to reduce maintenance costs. This is important not only for the health and appearance of the turf but also to maintain top-level playing conditions.

A little protection goes a long way to preserving the turf and reducing related maintenance costs by cutting down on the need to repair or replace the turf and continually rework the dirt in front of home plate. Our lineup of batting practice protectors include both Enkamat Plus™ and vinyl mesh. Enkamat Plus™ offers the highest level of protection. It can be cut on-site to suit your needs, both in front of home plate and around the back of the batting cage. BPTP's manufactured from Vinyl Coated Polyester Mesh have been used for many years.

WEIGHTED INFIELD PROTECTOR

Protects natural and synthetic turf without stakes. Steel chain sewn into vinyl sleeves in front, corners and back middle provide ballast to keep the protector in place, even in strong winds. Quick and easy to remove, it is manufactured from tough Pro Mesh Fabric for the highest spike resistance.

BATTING PRACTICE INFIELD PROTECTOR

This infield protector really protects the turf in front of home plate and down the base lines. Made from the latest generation of PVC-Polyester heavy duty Pro Mesh Fabric, it easily withstands intensive abuse caused by batting practice. The unique fabric allows this mat to be left down for longer periods without damaging the turf because sunlight, air, and moisture can penetrate through it.

BATTING CAGE TURF PROTECTOR

This 2 piece cage collar really protects the turf around the batting practice cage. Made from the latest generation of PVC-Polyester heavy duty mesh fabric Pro Mesh Fabric, it easily withstands intensive baseball spike traffic. It is non-absorbent and easy to clean by hosing. The unique fabric allows this mat to be left down for longer periods without damaging the turf.

BATTING PRACTICE TURF PROTECTION

INFIELD TRAINER PROTECTOR

Color-coded bunting/hitting targets built-into a quality turf protector. The Infield Trainer Protector saves turf and teaches by visualization the correct placement of bunts for hit (yellow) or sacrifice (green). Avoid red area for bunting, hit-and-run, and pull-hitting, but go to it for up-the-middle hitting. Major League Style adds yellow zone up first base side. Highly spike-tolerant heavy duty vinyl-polyester mesh with UV and mildew inhibitors.

TARGET COLORS

YELLOW - "bunt-for-a-hit target zones.

GREEN - the "sacrifice bunt" target areas.

RED - "bad bunt" zone, but also the area to avoid in hit-and-run or pull-hitting situations.

BPTP ENKAMAT PLUS™

Enkamat Plus™ is a composite of Geotextile bonded to Enkamat™. It has the qualities most groundskeepers look for in an all-round natural turf cover. It's effective, cost efficient and easy to install and remove. As a natural turf cover, Enkamat Plus™ works wonders. The geomatrix design of Enkamat™ keeps the Geotextile off the turf to provide an air space underneath the cover so that the turf can breathe at all times. Geotextile also allows some light to penetrate and rain to pass through.

RUN THE BASES

When it comes to fan involvement, "Run the Bases" is a big hit at all ballparks. It gives the fans a chance to come out onto the field and feel like a Pro. However, this creates a number of challenges for the groundskeepers. COVERMASTER® has the solutions to help groundskeepers deal with this event. Whether it's our Enkamat Plus™ roll out cover or our hard plastic tile systems, count on COVERMASTER® for the right product.

BRANDING

From seat covers to on-deck circles, covers, tarps, wind screens, and custom sports signage, there's a wide variety of opportunities to not only enhance your team's branding but also that of your sponsors. Ask us for details.

* Actual colors may vary

WINDSCREENS

WINDSCREEN

The main purpose of windscreens is to provide for wind and noise reduction. Increased privacy, better player focus and improved facility appearance are further benefits. COVERMASTER® windscreens are made with high tensile strength fabrics such as vinyl coated mesh and polypropylene. Highly ultra-violet resistant, they are available in various weights and grades to satisfy a wide range of applications. Windscreens can be ordered in standard or custom sizes. You can also choose from a variety of installation accessories.

COVERMASTER® WINDSCREENS CAN BE USED FOR:

- Baseball/Softball batter's eye backgrounds
- Baseball/Softball outfield fence screens
- Special event backdrops
- Advertising screens
- Spectator shade covers
- Camouflage storage areas
- Privacy enclosures for athletic fields
- Privacy enclosures for sports practice fields

PRO MESH™ WINDSCREEN**

The toughest, highest quality windscreen available! Made from Pro Mesh™ Material, a super-durable mesh fabric of tightly woven micro-fibers. It's virtually tear-proof. Pro Mesh™ is the only windscreen finished with double-needle lock stitching, eliminating the thread unraveling problem of traditional windscreens that are fully chain-stitched. Available in twenty colors, Pro Mesh™ Windscreen has a uniform, professional appearance that enhances our sharp multi-color imprinting.

- Grommets installed every 12"
- Limited Warranty: 5 Years
- 78% shading
- Custom Imprinting Available

PADDING

BASEBALL WALL PADDING

When it comes to protective padding for use around the stadium or sports field, you can rely on Covermaster® to meet your needs. Custom backstop and outfield wall padding by Covermaster® provides superior protection. This custom made padding can be supplied with sponsor messages or team logos and is available in various thicknesses, foam densities and colors. Player protection is of prime importance in the design and manufacture of all Covermaster® custom padding.

FEATURES:

- Foams: Polyfoam, Urethane, Open Cell, Cross-linked Polyethylene
- Choice of outdoor plywood backing thickness: 1/2", 5/8", or 3/4"
- Attachments to fit onto walls, chain link fences, or concrete
- Z Channel attachments for wood or concrete walls
- Sizes: Standard and Customized. Thicknesses from 1" to 4"
- Standard Padding is covered with 18 oz. vinyl
- High Ultra Violet resistant Vinyl available as well

Colors:

* Actual colors may vary

PROTECTIVE RAIL PADDING SOFTRAIL™

COVERMASTER® has exceeded all expectations of quality, durability and aesthetics in a safety product. This attractive padding was specifically designed for use on chain link fences and all types of rails. Made with a thick vinyl covering and a core of high density, protective closed cell foam, SOFTRAIL™ is a premium quality fence and rail padding with truly outstanding protective properties. SOFTRAIL™ was specifically designed to help guard against the possibility of serious injury around ballparks and sports fields when a player attempts to make a catch over a chain link fence. Unlike other types of rail padding, SoftRail™ can be cut to size on site, making it extremely versatile. Quick-fasten, self-locking nylon ties, spaced every four inches, hold the padding securely in place. Intended for long-term use, it's a product that will keep its shape, resilience and good looks for many years. Available in a variety of colors, it can even be custom matched to your team's colors. Nothing on the market compares. SOFTRAIL™ is supplied in standard 5ft lengths, however, SoftRail can be customized to suit your rail padding requirements. Custom color matching is available.

GRAPHICS

Sure to be a crowd pleaser, we can add custom graphics to any of our wall pads. Whether simple block letters or a full graphic display, COVERMASTER® has the expertise to ensure your wall pads will look their best.

SEAT COVERS & SPORTS SIGNAGE

SPONSORSHIP AND CROWD CONTROL

COVERMASTER® Seat Covers solve the problem of excess seating capacity and can potentially generate extra advertising revenue. Whenever a stadium or sports field finds it desirable to camouflage unsold capacity, custom designed seat covers are the answer.

Since every event has different seating requirements, COVERMASTER® Seat Covers allow you to adapt your seating capacity to match each one. As they are custom made, they are a great way to display team logos and pennants, or generate revenue as an advertising medium.

COVERMASTER SEAT COVERS CONVERTED THIS 72,000 SEAT NFL STADIUM INTO AN INTIMATE 28,000 SEAT MLS STADIUM, COMPLETE WITH NEW BRANDING

CROWD CONTROL Seat Covers will help prevent spectators from using unassigned seats.

MAINTENANCE With fewer seats exposed to both natural elements and spectators, facilities can save on housekeeping costs before and after events.

SPONSORSHIP Generate extra advertising revenue.

SECURITY Controlled access of seating areas allows you to tailor your security requirements on an event basis.

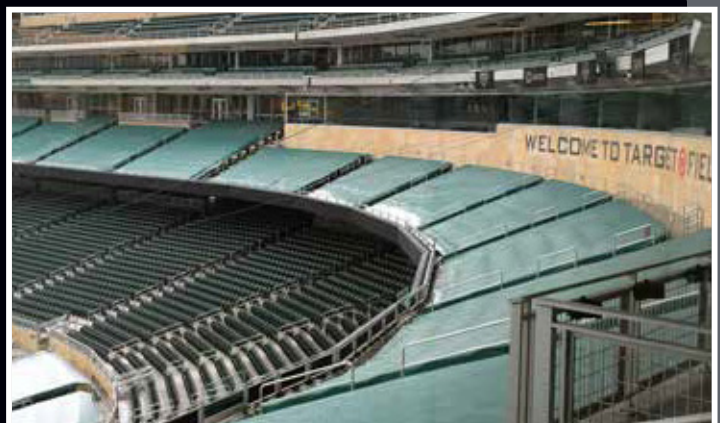

FULL HOUSE During certain events, you may want to cover distant, obstructed, or unused seats to give the impression of a full house.

WINTER PROTECTION Provide protection from severe winter weather and UV degradation for premium seating areas.

CUSTOM MADE COVERMASTER® Seat Covers are custom made and designed to suit your specific requirements.

EFFECTIVE SEATING CONTROL & SPONSORSHIP REVENUE

OFF SEASON PROTECTION OF PREMIUM SEATING

TURF PROTECTION

PLASTIC FLOORING FOR PEDESTRIAN USE

In today's economy, stadiums and athletic facilities need to use their venues for non-athletic events to increase revenues. However, protecting your major investment is of the utmost importance when it comes to covering an entire athletic field during concerts or dirt events or even just a small area. From the largest stadiums to the smallest gatherings, from the biggest rock bands to the smallest marching bands, COVERMASTER® has the answer for the perfect turf protection system that will meet both your needs and your budget.

MASTERSHIELD PLUS™

Designed for use on natural turf, synthetic turf and dirt/sand bases, MasterShield Plus™ is a snap lock portable event flooring system designed for high volume pedestrian traffic. Translucent sheets overlap to provide an easy to install, cost-effective turf protection system. Installing MasterShield Plus™ is simple - overlap each panel and step down until you hear MasterShield Plus™ snap into position, then move on to the next panel. No locks or swinging hinges required.

MasterShield Plus™ stadium flooring is ideally suited for covering both natural and synthetic turf. On natural turf installations, MasterShield Plus™ works equally well on both warm and cool season varieties. Manufactured from natural virgin translucent High Density Polyethylene (HDPE), MasterShield Plus™ allows sunlight to pass through the surface, thereby allowing photosynthesis to continue. Another advantage of utilizing translucent HDPE is that it allows the sunlight to penetrate the interlocking floor tiles and draw up ground moisture, which forms a canopy of moisture on the underside of the top surface. After sunset, when the temperature drops and the moisture condenses, it will drop back to the ground. This natural water recycling will provide water to keep the grass healthy. Top ventilation holes in the panels also allow air and moisture to reach the turf.

We have designed the support walls of MasterShield Plus™ to be rounded on the bottom to eliminate sharp edges and reduce any potential damage or cutting of the natural turf. This feature will result in a better weight distribution on the tile, thereby reducing the possibility of a "cookie cutter" effect on the grass surface. For synthetic turf, MasterShield Plus™ was designed specifically for today's systems and offers a superior level of protection against foreign contaminants. The overlapping design, with integrated out of sight Snap-Locks, reduces any potential channels for spilled liquids to find their way to the artificial turf. The rounded lower support walls of MasterShield Plus™ will protect the synthetic turf, while only leaving a slight trace of its presence once removed, which can be easily and quickly brushed out. This design will also prevent shifting of the snap tiles on the artificial turf or the displacement of the infill.

MASTERSHIELD LITE™

MasterShield Lite™ portable event flooring is a versatile stadium flooring system. It is ideal for natural and synthetic turf protection. It creates a homogeneous floor for areas where pedestrians and lightweight static equipment are to be used. MasterShield Lite™ portable flooring system is an economical way to turn your facility into a truly multi-purpose event venue, whether it is natural turf, synthetic turf or a dirt/sand base.

MasterShield Lite™ with air holes is ideal for natural turf fields. Each interlocking tile is designed with air holes, which allow for air ventilation and drainage. It has the added benefit of creating a moisture canopy underneath the tile, thereby creating an ideal amount of moisture for the natural grass. MasterShield Lite™ modular flooring may be used as turf protection for various varieties of cool and warm weather natural turf. MasterShield Lite™ without air holes is designed for synthetic turf and dirt/sand surfaces, as it greatly diminishes the likelihood of spills penetrating to the surface below. MasterShield Lite™ may be used for protection of both duo and mono-filament synthetic turf and both rubber and sand in-fill types of sports fields. Both temporary flooring systems feature a cross ribbing structure core for effective weight distribution.

MASTERSHIELD TRAX™

Designed for extra heavy duty stadium turf protection and temporary roadway use, MasterShield Trax™, with extremely high built-in spread load capabilities, is used as a heavy duty temporary roadway and is designed to take the weight and stresses exerted by forklifts, large trucks, and 100 ton cranes. With the culmination of over 40 years of experience in temporary roadways and event flooring solutions, Covermaster has used the latest computer aided design and testing to create a product that meets the challenges and requirements of the event flooring industry.

MasterShield Trax™ is light enough to be put in position by hand, and with its overlapping design and unique interlocking system, it creates a continuous surface free from gaps. Each panel can be overlapped and interlocked with other panels, creating a smooth surface. The streamlined, integrated interlock system consists of five retained fasteners per panel that are engaged and disengaged by rotating them ninety degrees with the installation tool provided.

The lightweight design and fastening technology minimizes worker bending, eliminates the need for loose components, and contributes to a safe and efficient job site environment. The durable design can sustain the varying types of vehicular, stage, sound system and other structural loading and wheeled traffic stress, and is compact and well suited for chair setups, tent flooring and pedestrian pathways. MasterShield Trax™ incorporates a flat bottom panel, which adds to its stability and strength.

ECONOMICAL ROLL OUT COVERS FOR CONCERTS / CROWD GATHERINGS

ENKAMAT PLUS™ - A composite of geotextile bonded to Enkamat™. It has the qualities most groundskeepers look for in an all-round natural turf cover. The geomatrix design of Enkamat™ keeps the geotextile off the turf to provide an air space underneath the cover, so that the turf can breathe at all times. The geotextile also allows some light to penetrate and permits rain to pass through. Wherever a cover is needed to protect natural turf and maintain good looks, Enkamat Plus™ is the affordable cover you can count on.

ENKAMAT FLATBACK™ - A unique product designed for sports field surface protection which will allow the natural turf underneath to stay beautiful and green. It's easy to install, taking only a few hours to have the entire field covered. Enkamat Flatback™ has a tightly interwoven flat upper layer (hence its name 'Flatback') which can withstand the weight of thousands of people and staging equipment. Enkamat Flatback™ allows for air and rain to pass freely through to the turf below.

MASTERSHIELD VINYL™ - A heavy duty vinyl cover, Mastershield Vinyl™ is a special use cover to protect synthetic turf sports surfaces. The cover is made of reinforced vinyl of extraordinary strength. It is fire retardant, waterproof, and rot and mildew resistant. Since the cover is easy to clean, the maintenance requirements are within the capabilities of virtually all types of facilities.

THE COVERMASTER STORY

When it comes to any kind of sports surface, Covermaster Inc. is proud to be the first choice for protection. Stadiums, outdoor sports fields, gymnasiums, ice arenas, tennis courts and even golf courses ... for 50 years, Covermaster has been leading the industry with cover solutions that both protect and increase the versatility of recreational venues worldwide.

Covermaster's products can convert sports centers into revenue-generating, multi-purpose facilities. Our unparalleled range of gym floor covers are slip-resistant and durable. While other companies offer surface protection as a sideline business, we make it our specialty.

We supply innovative products made from the highest quality materials and provide unmatched customer service. That's what makes our lineup the preferred choice among discriminating facilities professionals around the world. In fact, 90% of National Football League teams, 90% of Major League Baseball and 75% of Major League Soccer teams are using one or more of Covermaster's surface covers on their fields.

With our online ordering system, facilities managers have an easy, 24/7 way to shop for standard items, request a quote on specialized options or receive a free sample.

Explore our ever-expanding selection of supporting products including spot covers, windscreens, seat covers and temporary roadways, or our printing capabilities that are ideal for everything from custom team graphics to sponsor advertising, to complete facility branding solutions.

Whether it's a new gymnasium floor, turf, ice, or dirt, Covermaster solutions are your best choice for premium, cost-effective protection and long service life.
